New - Crewsaver ISO Ocean Liferaft

Crewsaver is pleased to announce the launch of its new, high quality and innovative Liferaft range at the London International Boat Show 2012.

The Crewsaver ISO Ocean Liferaft range has been specifically designed, fully tested and certified to meet the stringent ISO 9650-1 standard for inflatable liferafts.

The Crewsaver ISO Ocean Liferaft is designed for extended offshore and ocean use, and for extreme weather conditions such as high wind and significant wave heights. Key features include a thermal insulated floor, an external SOLAS approved strobing light and an emergency pack kitted out with essential survival equipment. The emergency pack supplied comes in two variations, determined by the time likely to be spent onboard the raft before being rescued and therefore less than 24 hours or more than 24 hours.

Available in five sizes the Crewsaver ISO Ocean Liferaft can accommodate from four to twelve persons depending upon the model.

The Crewsaver ISO Ocean Liferrafts embody the latest design and technological advances. Vacuum packed into either the new low profile, lightweight container, or the weather proof valise, the Crewsaver ISO Ocean Liferrafts are compact and take up precious little space on board.

When activated, the raft inflates quickly to form a rectangular (4-8 person) or hexagonal (10 and 12 person) shape. The outer perimeter is formed with two air tubes, one above the other, with a canopy supported by an inflatable 'beam'.

As essential safety features, the entire raft is finished in a hi-vis orange colour and has an interior and exterior light to ensure optimum visibility. Other safety features include large water ballast pockets and a semi rigid boarding ramp to aid people's access.
